

Morpho - Bug #512

Cannot run morpho under JDK1.1.8

Description

When trying to run morpho under JDK1.1.8, I get the following error:

"Error loading class edu/ucsb/nceas/morpho/framework/ClientFramework: Bad major version number"

Possibly because compiler needs to be told to compile for JDK1.1.8 by using "-target 1.1" switch, as described in following Sun forum:

<http://forum.java.sun.com/thread.jsp?forum=37&thread=257438>

Haven't tried building a version using InstallAnywhere, only tried running from a modified morpho.bat (set classpath by hand to include JDK1.1.8 "classes.zip" and also "swingall.jar" in addition to all the required morpho jars).

Needs to be rectified before the next release.

History

- #1 - 06/10/2002 09:05 AM - Dan Higgins
- Current release (1.1.2) does work with JDK1.1.8 on Macs OS 8,9. Changes are needed in the routines that use https, however. Also, changes made in converting code to use JWS also use some routines that don't exist in 1.1.8.
- #2 - 09/30/2002 01:35 PM - Dan Higgins
- Primary reason for support for Java JRE 1.1.8 is for Macintosh OS 9. Apple is strongly pushing for adaption of OS X which supports JRE 1.3. At this point we have decided to not spend the time to support JRE 1.1.9 (i.e. Mac OS 9) and just support JRE 1.3 (i.e. Mac OS X).
