

Kepler - Bug #5155

To exclude a file or directory requires updating at least four places, only one should be necessary

08/18/2010 03:53 PM - Christopher Brooks

Description			
jianwu < jianwu@sdsc.edu > writes:			
If excluding those from building system, please make sure it's also updated for eclipse building. To update it, just modify the PtolemyClasspathStart file at build-area/resources/eclipse.			
We probably also need to update corresponding files at build-area/resources/netbeans and build-area/resources/idea.			
I'm mystified as to why a human has to update four locations with the same data. Isn't this why we have computers?			
I should update one master file, the Netbeans, Eclipse and Idea files should be automatically updated.
