Description

This issue is related to multiple workflows execution. In order to reproduce it do as follows:

1. Open Kepler
2. Open workflow (loop_1.xml)
3. You should have two workflows opened Blank and loop_1.xml
4. Start loop_1.xml
5. While loop_1.xml is executing go back to "Blank" worfklow
6. Choose File -> Exit
7. Kepler closes everything without warning user that workflow is running

This issue has an impact workflow execution where users start long lasting workflows.

History

#1 - 09/22/2010 08:56 AM - Christopher Brooks

Personally, I prefer applications that actually exit when I select exit. :-)

However, I see the point here.

The enhancement would be that upon exit, the system would check to see
if any models are running. If they are running, it would bring up a
dialog that says "A model is running do you really want to exit?"
That dialog should also have a checkbox:
"Do not show this dialog again". That user preference would be stored.
