# Kepler - Bug #5196

## uploading to remote server error.

09/29/2010 03:23 PM - jianwu jianwu

Status:	Resolved	Start date:	09/29/2010	
Priority:	Normal	Due date:		
Assignee:	Derik Barseghian	% Done:	0%	
Category:	reporting	Estimated time:	0.00 hour	
Target version:	2.1.0	Spent time:	0.00 hour	
Bugzilla-ld:	5196			

### Description

First of all, I think the popup dialog for workflow run uploading is not quite clear. It is 'To upload to a remote repository, select one from the component search preferences.'. I think a better one is like 'To upload to a remote repository, please first select choose one remote save site at Tools->Preferences->Components.'

I chose library.kepler-project.org, and get exception when uploading a workflow run on my windows machine. I don't know why it tries to access this directory: /var/kepler/temporary/uploads/04-Helloworld-run2.kar

```
[run] d: SEEK username: kepler password: org: unaffiliated
                  [run] auth with dn: uid=kepler,o=unaffiliated,dc=ecoinformatics,dc=org

#### History

## #1 - 09/29/2010 03:25 PM - jianwu jianwu

More background info: I did it at Workflow Run Manager Tab.

### #2 - 09/29/2010 05:48 PM - Derik Barseghian

Should be fixed now in trunk and 2.1 w/ ben's check-ins at r25928 and r25929.

Jianwu can you try again and close this bug if it works for you? You could upload to kepler-dev.

Ben and I have tested uploading a workflow kar to kepler-dev and library and it's working for me (I've since deleted the kars I uploaded to library). One thing we noticed is it takes a while for the web page to show the name of the component...initially it just shows as Null, but a little while later if you refresh the page you'll find the name is there.

#### #3 - 09/29/2010 08:59 PM - jianwu jianwu

I can upload to kepler-dev without updating my Kepler local copy. Does it mean it works now? I didn't try kepler-dev when firing the bug.

#### #4 - 09/29/2010 10:28 PM - Derik Barseghian

Yeah, it should be fixed now. There were actually two problems, the one you reported which I believe only affected the 'library' metacat and which Ben fixed server-side, and a Kepler bug that Ben fixed with those check-ins. You can test uploading to library again if you want, with or without the updates, and it should work. If you put "delete-me" in the name I'll delete your uploaded kar for you.

# #5 - 09/30/2010 09:24 AM - jianwu jianwu

It works for me to upload to library.kepler-project.org before and after updating my local kepler. Close the bug.

Derik: I uploaded two files: delete-me-run6 and delete-me-run5. Please help me to delete them. Thanks.

### #6 - 03/27/2013 02:29 PM - Redmine Admin

Original Bugzilla ID was 5196
