

Kepler - Bug #5207

Sensor changes color in response to configuring the actor even if no changes made

Description If you import a sensor site, and don't run it, but simply Configure Actor a given sensor actor, and then hit cancel after making no changes, the actor changes colors from what i think is a dark gray to a dull red/brown. I'm guessing the color change denotes a change is pending to send to the SPAN server, but no change was made.
