Kepler - Bug #5210

Focus stolen from user trying to drag components around during execution

10/19/2010 01:42 PM - Derik Barseghian

Target version:	sensor-view-1.x.y		**Spent time:**	0.00 hour
Bugzilla-Id:	5210			

Description

When trying to drag around a component during a sensor site workflow execution, focus on the component is lost. This makes it nearly impossible to rearrange a workflow with sensors with high sampling rates.

Maybe this is related to how sensor actors update in the gui to show their last data points.

This is still a problem on trunk: dragging around an updating sensor actor and you lose your grab on the actor when it updates.
