

Kepler - Bug #5250

confusing ant options.

11/30/2010 05:19 PM - jianwu jianwu

Status:	Resolved	Start date:	11/30/2010

Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	5250		

Description

In Kepler trunk, when you type 'ant' command at build-area directory, all ant options will show up. But some of them are confusing:

1) the explanations for ant option 'build-ptolemy-execution-engine' and 'build-ptolemy-lite' are the same.

2) the explanations for ant option 'run-workflow-no-gui' and 'run-workflow-no-gui-server' are the same. There is also no explanation on 'run-workflow-no-gui-server' at <https://kepler-project.org/developers/teams/build/documentation/build-system-instructions>.

Some other options might also not be up-to-date or correct.

This option list should be reviewed for accuracy and completeness.

History

#1 - 12/01/2010 11:33 AM - David Welker

- 1.) Removed the descriptions for these items. These are for internal developer use only.
- 2.) Fixed the description.
