

Kepler - Bug #5348

Opening KAR or opening workflow under KAR behaves differently.

03/10/2011 11:36 AM - David Welker

Status:	Resolved	Start date:	03/10/2011
Priority:	Normal	Due date:	
Assignee:	jianwu jianwu	% Done:	0%
Category:	interface	Estimated time:	0.00 hour
Target version:	2.4.0	Spent time:	0.00 hour
Bugzilla-Id:	5348		
Description			
<p>If I create a new workflow and save it as Foo.kar, then when I search for "foo, I will find a KAR called Foo.kar which has a Foo workflow in it.</p> <p>If I open Foo.kar by right-clicking on it, make a change, and choose to save, then Foo.kar itself is modified.</p> <p>In contrast, if I open the Foo workflow by right clicking on it, make a change, and choose to save, then the Save As dialog is opened instead.</p> <p>This is unnecessarily confusing, and in my view is a user interface bug.</p>

I can re-produce this phenomena. Another difference is that Foo.kar cannot be drag-and-drop into canvas, but the Foo workflow under Foo.kar can do it.

I think the reason is that the objects in the two actions are different. The first is kar file, and the second is the xml in the kar.

Since Kar file might have other files except the workflow xml, especially in reporting suite, I think this phenomena is reasonable.

I changed it to be enhancement.

#2 - 08/06/2012 12:30 PM - Ilkay Altintas

Add a new bug to reevaluate how opening kars vs. XML should work.

#3 - 08/07/2012 04:04 PM - jianwu jianwu

close this bug. A further reevaluation bug is created at bug 5348.

#4 - 08/07/2012 04:05 PM - jianwu jianwu

correct new bug id: A further reevaluation bug is created at bug 5667.

#5 - 03/27/2013 02:30 PM - Redmine Admin

Original Bugzilla ID was 5348
