

Kepler - Bug #5415

module releasing and downloading by module manager should keep file mode.

Bugzilla-Id:	5415		
<b>Description</b> Currently, the modules to be released are compressed to be zip files, which will lose the file mode. Some modules have executable files, such as the *.sh files in the master-slave module. Users have to change file mode by themselves. It should fix this problem if the file compression is changed to rar file format.			

History
