<b>Bugzilla-Id:</b>	5423		

#### Description

We will have a kepler-server component, it consists of three parts:

1. scheduler
2. workflow run engine
3. kepler itself.

First we should put them into a servlet war file.

Then will design and implement installer for these to put war and kepler executable in place as part of the normal installation procedure.

Note: we should NOT have the duplicated kepler executables in the installer.

The priority order of the installer including the server components is

linux > mac > windows

#### History

##### #1 - 03/26/2012 01:19 PM - Jing Tao

Now we are creating a product named kepler-run-engine. It consists four components -- the workflow run engine, the workflow run engine client, the scheduler and the scheduler client. This product will be released soon.
