Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	5445		
Description			
<p>The Kepler download page at https://kepler-project.org/users/downloads has a link for the Kepler-2.2.0 linux tar file: https://code.kepler-project.org/code/kepler/releases/installers/2.2/kepler-2.2-linux.tar.gz</p> <p>Unfortunately, this tar file creates many directories in the current directory instead of creating a kepler-2.0.0 subdirectory and putting the many directories in that subdirectory.</p> <pre>bash-3.2\$ wget https://code.kepler-project.org/code/kepler/releases/installers/2.2/kepler-2.2-linux.tar.gz --2011-07-31 09:57:28-- https://code.kepler-project.org/code/kepler/releases/installers/2.2/kepler-2.2-linux.tar.gz Resolving code.kepler-project.org... 128.111.220.65 Connecting to code.kepler-project.org 128.111.220.65 :443... connected. History

#1 - 08/15/2011 09:01 AM - Christopher Brooks

This did not get fixed in 2.2.0, but Jing's bug#5461 nicely sums up the problem, so I'm marking this older bug as a duplicate.
