<b>Description</b>			
Running "ant" says			
javadoc Create javadoc for all the modules in modules.txt. Use -Dfull=true if you want to link your documentation to documentation of Kepler and Ptolemy too.			
However, ant javadoc <del>Dfull=true fails.</del>			
<del>--start--</del>			
bash-3.2\$ ant javadoc -Dfull=true			
Buildfile: /Users/cxh/src/kepler/build-area/build.xml			
javadoc:			
BUILD FAILED			
/Users/cxh/src/kepler/build-area/build.xml:204: src '/Users/cxh/src/kepler/null/lib/jar/kepler-r7920.jar' doesn't exist.			
Total time: 0 seconds			
<del>--end--</del>			
ant javadoc -Dfull=true should be part of the nightly test suite.

It looks like -Dfull was used to include Kepler and Ptolemy sources when generating the javadocs. However, running without -Dfull does this anyway so I removed it.
