

Kepler - Bug #5453

ant javadoc -Dfull=true fails

08/05/2011 08:08 AM - Christopher Brooks

Status:	Resolved	Start date:	08/05/2011
Priority:	Normal	Due date:	
Assignee:	Ilkay Altintas	% Done:	0%
Category:	documentation	Estimated time:	0.00 hour
Target version:	2.4.0	Spent time:	0.00 hour
Bugzilla-Id:	5453		
Description			
Running "ant" says			
javadoc Create javadoc for all the modules in modules.txt. Use -Dfull=true if you want to link your documentation to documentation of Kepler and Ptolemy too.			
However, ant javadoc Dfull=true fails.			
--start--			
bash-3.2\$ ant javadoc -Dfull=true			
Buildfile: /Users/cxh/src/kepler/build-area/build.xml			
javadoc:			
BUILD FAILED			
/Users/cxh/src/kepler/build-area/build.xml:204: src '/Users/cxh/src/kepler/null/lib/jar/kepler-r7920.jar' doesn't exist.			
Total time: 0 seconds			
--end--			
ant javadoc -Dfull=true should be part of the nightly test suite.			

History

#1 - 06/13/2012 07:04 PM - Daniel Crawl

It looks like -Dfull was used to include Kepler and Ptolemy sources when generating the javadocs. However, running without -Dfull does this anyway so I removed it.

#2 - 03/27/2013 02:30 PM - Redmine Admin
