#### Description

After decompressing the linux installer(RC1), i tried to run kepler by type ./kepler.sh. But I got an error:

```
tao@pacific:~/download/kepler-2.3-rc1$ ./kepler.sh
```

```
[null] Copying 1 file to /home/tao/KeplerData/kepler.modules/build-area
```

```
[null] Copying 1 file to /home/tao/KeplerData/kepler.modules/build-area
```

```
JVM Memory = 5m 512m
```

```
Error: The following modules are missing:
```

```
kepler-2.2.0
```

Why it looks kepler-2.2.0? It is kepler-2.3 release.
