<b>Description</b>			
CommunityServices and JobEngine are code shared with other projects. In committing these to the Kepler SVN we will effectively be branching. Tag first in Cornell CVS first so we know from where we branched.

Today I tagged all the relevant modules in the Cornell CVS as "barseghian-20110901-checkpoint". Although I only selected the following dirs to tag in eclipse, post-tag it looks like everything in the dirs IS and ITBirdSource also got tagged. Oh well. These are the relevant dirs:

IS/BAP-BackEnd  
IS/BAP-Data  
IS/BAP-EAR  
IS/BAP-FrontEnd  
IS/BAP-FrontEnd-Java  
IS/BAP-Google  
IS/BAP-S3Maintenance  
IS/CommunityServices  
IS/JARLib  
IS/JobEngine  
IS/Spring-SecurityBaseline  
IS/Spring-SecurityBaseline-Java  
ITBirdSource/Core  
kepler
