Description			
You should be able to get patches and change suites from the command line with a released Kepler. See user question: http://lists.nceas.ucsb.edu/kepler/pipermail/kepler-users/2011-September/002583.html

History

#1 - 06/22/2012 02:56 PM - jianwu jianwu

User question link correction: <http://lists.nceas.ucsb.edu/kepler/pipermail/kepler-users/2011-September/001961.html>.

#2 - 07/31/2012 10:45 AM - jianwu jianwu

It is related to bug 4516 since both need module manager interaction through command line.

#3 - 07/31/2012 10:57 AM - jianwu jianwu

We needs a full command line support for Module Manager to support workflow module dependency checking and Kepler update.

Re-schedule to 2.5.

#4 - 07/31/2012 12:57 PM - Daniel Crawl

It seems like a bug to display a window when running -nogui. If patches are available, kepler.sh could print a message saying patches are available and must be run with the gui to install them.

#5 - 08/06/2012 12:26 PM - Ilkay Altintas

Report the small fix and add/link to the 2.5 bug.

#6 - 08/08/2012 03:47 PM - jianwu jianwu

the problem in comment 4 is fixed in version 30376. close this bug.
