# Kepler - Bug #5506

## Windows Installer Page does not mention 2.3?

### Description

When I start up the Windows Installer, the page says Kepler-2.3, but
the date is August 12, 2011.
Also, the page says
"The 2.0 release contains a major architectural overhaul from previous releases"

I would remove that text, it is rather obvious.

Could there be text about what is new in 2.3?

These are minor suggestions.

### History

**#1 - 10/05/2011 06:54 PM - Derik Barseghian**

Strange, I removed this same text from README.ftl at r28361...

**#2 - 11/21/2011 07:29 PM - Derik Barseghian**

Verified not in rc4
