Kepler - Bug #5509

How do I run the demos

10/05/2011 06:54 PM - Christopher Brooks

Status:	Resolved		**Start date:**	10/05/2011
Priority:	Normal		**Due date:**	
Assignee:	Daniel Crawl		**% Done:**	0%
Category:	documentation		**Estimated time:**	0.00 hour
Target version:	2.4.0		**Spent time:**	0.00 hour
Bugzilla-Id:	5509			

Description

In Kepler-2.3 rc2, Help -> Kepler Documentation says

"Note that the demos are not included in the default developers build. To download the demos, run:
cd build-area
ant get -Dmodule=outreach"

I'm not running the devel version, this is the installer version.

How do I run the demos from an installed version?

Shouldn't the help page tell me how?

I'd like to have links to the demos.

This bug seems possibly important.

History

#1 - 11/13/2011 10:02 AM - Christopher Brooks

In a kepler-users post, Allen Hartley Hurlbert wrote:

"Yes, the demos run fine (although I'll note that finding the demo files took some work; the "getting-started-guide" specified the "demos/getting-started" directory and it would have been useful to know the more complete path: "Kepler-2.2/outreach-2.2.0/workflows/demos/getting-started")."

#2 - 06/15/2012 11:50 AM - Ilkay Altintas

Enable the demos to show up in the actor tree with their full version.

Module demos should also be displayed.

#3 - 07/31/2012 12:45 PM - Daniel Crawl

The Help -> Kepler Documentation links to the demos are working again.

The demos are now accessible in the actor tree. I've updated the getting started guide to describe opening them from the actor tree instead of navigating to their directory using the file dialog.
