Also, why is "xmltoken" an option in the list? For double you enter "double", not DoubleToken, etc.

#2 - 12/05/2011 05:45 PM - Christopher Brooks

Good points!

- On OS X, when choosing or typing in a Type, there isn't enough vertical space and characters can be hard to read.
- The default horizontal space is too short to show a number of the default options.

I modified ptolemy/actor/gui/PortConfigurerDialog.java and made the width of the type column wider and the height of the rows greater.

Also, why is "xmltoken" an option in the list? For double you enter "double", not DoubleToken, etc.

I modified ptolemy/data/expr/Constants.java and changed "xmltoken" to "xml".

The port dialog could use some work, but that would be more of an enhancement than a bug fix.

I'm leaving this bug for Derik to close or to change to an enhancement.

#3 - 06/15/2012 03:54 PM - Derik Barseghian

Much better, thanks. Closing.
