Description

Click TPC worklfow link on the sanparks skin, user will get a list of workflows. Every workflow has three associated actions. One of them is Schedule. But click the button, it just shows a blank page. It worked, but i don't know why it doesn't work any more.

History

#1 - 12/20/2011 11:57 AM - Jing Tao

In scheduleWorkflowRun.jsp file, it has code like:
String karId = LSIDUtil.getDocId(karLsid, false);
PermissionController permissionController = new PermissionController(karId);

The karId will be without version. But PermissionController code was changed and the parameter must have version. So it didn't work. When I change code to be:
String karId = LSIDUtil.getDocId(karLsid, true);

then the karId will have version and it works.
