

Metacat - Bug #5572

Couldn't upload a kar file from kepler to metacat

Description

I used "ant clean install" a metacat. Then I went through the web pages to configure the metacat with a fresh db.

When I tried upload a kar file from kepler.2.3, i got this error:

```
[ERROR]: MetacatHandler.handleUploadAction - Upload Error: Hazelcast Instance is not active!  
[edu.ucsb.nceas.metacat.MetacatHandler
```

Ben suggested to restart tomcat. So i restarted tomcat and uploaded another kar file. But got this error:

```
knb 20120202-15:42:37: [ERROR]: MetacatHandler.handleUploadAction - Upload Error: null  
[edu.ucsb.nceas.metacat.MetacatHandler]
```

Each time i chose to make the kar file public readable.

History

Running Kepler 2.3 (just installed from installer) and saving to localhost repository (Metacat trunk) works for me. I do get a Metacat log error about the object format for the data file not being found when generating DataONE SystemMetadata, but that does not prevent the kar from being saved.

```
"The format specified by application/vnd.ms-excel does not exist at this node."
```

Ben,

Did you make the kar file public readable?

#3 - 02/03/2012 10:43 AM - Jing Tao

Tried a fresh metacat, the error has gone.

So my local changes may cause the issue. I am going to close the bug.
