

Kepler - Bug #5581

Make UI improvements to Components Download

03/27/2012 02:44 PM - Derik Barseghian

Target version:	2.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	5581		

Description

When you download a kar from a remote repository via kepler, you typically:

*Click Sources and configure Preferences->Components to check-mark a remoteRepository

- Search Components for your term (As the very slow search occurs (bug#5276), the entire Kepler UI locks up and no busy cursor is shown)
- Right-click on a result kar, and select Download.
- Click cancel to clear the search results

The kar is placed in your MyWorkflows dir, but if this is the first kar put there, MyWorkflows does not show up in the Components tree until you take some other action that 'rebuilds' the tree, e.g. clicking the Build button beneath Sources->Components, or sav

To fix this bug:

- During Components search, only lock the Components panel, and show a busy cursor.
- Display the MyWorkflows dir after a first KAR is downloaded into it.

In the same ballpark is bug#4953. Also, strangely if you go through the scenario above, and subsequently save a new workflow into MyWorkflows, MyWorkflows continues to not show up, even though if you just start kepler fresh, don't do a remote search, and save a first workflow into MyWorkflows it will.

History

#1 - 03/27/2012 04:24 PM - Derik Barseghian

At r29644 MyWorkflows is shown after first kar download.

#2 - 03/27/2012 06:22 PM - Derik Barseghian

A wait cursor does show when Component Search is started by clicking the Search button. It doesn't if you hit enter in the search field, which seems to me the more common case. I tried unsuccessfully to fix it at r29645. See also this thread which might be relevant:
