

Kepler - Bug #5587

long parameter values get replaced with scrollbar

04/16/2012 03:45 PM - Daniel Crawl

Bugzilla-Id:	5587		
Description			
In the actor parameters dialog, if a parameter value has more characters than can fit in the text box, the text box is replaced with a scrollbar.			

History

#1 - 04/16/2012 04:12 PM - Christopher Brooks

I'm not sure what the bug is here, could you post a screenshot and/or a detailed description of how to replicate the issue?

#2 - 04/16/2012 04:17 PM - Daniel Crawl

To reproduce:

1. add actor to canvas
2. double click on actor to open actor parameters dialog
3. in one of the parameter value text boxes, insert characters until there's too many to fit in the box

#4 - 06/11/2012 10:40 AM - Daniel Crawl

I just checked, and this is still a problem. I added a screen shot.

#5 - 06/12/2012 10:38 AM - Daniel Crawl

Patricia fixed in r63735.

#6 - 08/28/2012 03:44 PM - Daniel Crawl

I'm reopening since this is occurring again. The steps in comment 2 will demonstrate the problem. I verified again that r63735 fixed the problem, so the regression has happened since then.

#7 - 08/29/2012 08:27 PM - Christopher Brooks

The problem is that JTextArea should not be used when there is just a single line and no scroll bar.

<http://docs.oracle.com/javase/tutorial/uiswing/components/textarea.html>

says:

"If you need to obtain only one line of input from the user, you should use a text field."

It seems like part of the problem is that the JTextArea gets a scrollbar and wants more screen real estate, but the GridBagLayout in ptolemy.gui.Query is not giving it space.

I'll look into this, but I'm not confident.

#8 - 08/29/2012 09:44 PM - Christopher Brooks

This is fixed.

I added code to Query:

```
protected static void _textAreaSetRowsAndRepackParent(JTextArea textArea,
    int minimumNumberOfRows) {
    // This method is based on code by Patricia Derler that was
    // originally in PtolemyQuery.

    // One test for this is to drag in a StringConst and type in
    // lots of characters. You should get a scrollbar. See
```

```
// http://bugzilla.ecoinformatics.org/show\_bug.cgi?id=5587
if (textArea.getRows() < minimumNumberOfRows) {
    textArea.setRows(textArea.getRows() + 1);
    textArea.revalidate();
    Component parent = textArea.getParent();
    while ((parent != null) && !(parent instanceof ComponentDialog)) {
        parent = parent.getParent();
    }
    if (parent instanceof ComponentDialog) {
        ComponentDialog dialog = (ComponentDialog) parent;
        dialog.doLayout();
        dialog.pack();
    }
}
}
```

This is based on code by Patricia that was in PtolemyQuery.
Now PtolemyQuery calls this method as well.
