Description

Need to move the vegbank,org DNS servers so that they are managed at NCEAS rather than at the current ISP. Matt and Mark will start the setup for this at NCEAS, and when the technical infrastructure is in place John will submit the changes at Verisign to switch the name servers.

History

#1 - 08/26/2002 11:57 AM - Matt Jones

I have now created the vegbank.org DNS config files at NCEAS, with argus as the master and hyperion as the slave for the vegbank.org domain. Only two hosts are listed (vegbank.org and www.vegbank.org) -- both argus and hyperion respond with the correct information. We can easily add more hostnames as needed.

I have made a request of UCSB to see if they will allow ns1.ucsb.edu and ns2.ucsb.edu to act as the primary and secondary name servers for the domain, and configure them to point at argus as slaves for the zone.

After UCSB is set up, then we can do the transfer at Verisign. Waiting for response from UCSB.

#2 - 08/29/2002 11:18 AM - Matt Jones

UCSB now supports the vegbank.org domain as well. John can make the switch at Verisign any time that he is ready. The new name servers for the domain should be:

ns1.ucsb.edu
and
ns2.ucsb.edu

My part in this is doe, I think. When everything is working, John should close this bug.

#3 - 09/03/2002 08:39 AM - John Harris

Ok, the vegbank system is now hosted completeley through NCEAS. I'm closing this bug.
