

Kepler - Bug #5603

ant run -Dworkflow=\${HOME}/Downloads/SimpleLoop.kar fails

Description			
ant -p says:			
run Compile, then run Kepler along with the modules in modules.txt. Use -Dworkflow=model.xml to run a model.			
When I run:			
ant run -Dworkflow=\${HOME}/Downloads/SimpleLoop.kar			
I get			
<pre>[run] RunClasspath:ptolemy /Users/cxh/src/kepler/ptolemy/src [run] Set environment variable: PATH = /opt/local/bin:/opt/local/sbin:/Users/cxh/.local/bin:/Library/Frameworks/Python.framework/Versions/2.7/bin:/opt/subversion/bin:/System/Library/Java/JavaVirtualMachines/1.6.0.jdk/Contents/Home/bin:/usr/local/texlive/2011/bin/x86_64-darwin:/Applications/MATLAB_R2012a.app/bin:/usr/local/bin:/opt/local/bin:/opt/local/sbin:/Users/cxh/.local/bin:/Library/Frameworks/Python.framework/Versions/2.7/bin:/opt/subversion/bin:/System/Library/Java/JavaVirtualMachines/1.6.0.jdk/Contents/Home/bin:/usr/local/texlive/2011/bin/x86_64-darwin:/Applications/MATLAB_R2012a.app/bin:/usr/local/bin:/usr/bin:/bin:/usr/sbin:/sbin:/usr/local/bin:/usr/X11/bin:/usr/local/git/bin:/usr/texbin:/Users/cxh/src/kepler/r/lib:/Users/cxh/src/kepler/common/lib:/Users/cxh/src/kepler/common/lib/ptolemy/matlab [run] Set environment variable: R_HOME = /Library/Frameworks/R.framework/Resources [run] Checking for patches... [run] Found OS Extension file: /Users/cxh/src/kepler/apple-extensions/module-info/osextension.txt [run] loading OS extensions for OS Mac OS X with class org.kepler.osx.KeplerOSXExtension [run] Building Kars... [run] INFO (org.kepler.Kepler:_trySaveOutModuleTree:539) Module configuration has changed, deleting cache [run] Ran additional initialization for module core from class org.kepler.module.core.Initialize [run] Ran additional initialization for module gui from class org.kepler.module.gui.Initialize [run] Executing ptExecuteApplication [run] Kepler Initializing... [run] Unsupported file type or connection not available: file:/Users/cxh/Downloads/SimpleLoop.kar [run] Done. [run] Ctrl-c to exit. [run] Ran additional cleanup for module core from class org.kepler.module.core.Shutdown</pre>			
In addition, the process hangs and I have to type control-c.			
This makes it annoying to use Kepler to check out bugs and open models.			
ant run -Dworkflow=SimpleLoop.kar also fails.			
Basically, it looks like -Dworkflow does not work?
