

Kepler - Bug #5607

constant actor icon won't automatically re-size since 2.3.

Target version:	2.4.0	Spent time:	0.00 hour
Bugzilla-Id:	5607		
Description			
<p>For actor 'Constant' and 'String Constant', Kepler GUI used to automatically replace long text with its first a few characters followed by '...'. I validated it in Kepler 2.2. But since Kepler 2.3 (also in Kepler trunk), these two actors won't re-size anymore. All the text in their value parameter is displayed in GUI. It is very unfriendly when the text is very long.</p> <p>I attached a demo workflow and its displays in Kepler 2.2 and 2.3.</p>

This bug might be related to bug 5587.

#4 - 06/15/2012 10:36 AM - Christopher Brooks

If the value of a Const actor is a long string, then the icon is not truncated.
This occurs in both Kepler and Vergil.

#5 - 06/15/2012 03:11 PM - Christopher Brooks

I've backed out a portion of this change:

2011-03-03 16:41 cshelton

- [r60470] /trunk/ptolemy/vergil/icon/AttributeValueIcon.java, /trunk/ptolemy/vergil/icon/BoxedValueIcon.java: Modified BoxedValueIcon to ignore the default displayWidth and displayHeight parameters and render the full string value of the attribute in its icon.

I've sent email to Charles asking for a use case that requires the icon to not be truncated.

This should be left open until Charles and I reach a consensus about this.
