History

#1 - 07/31/2012 12:48 PM - Daniel Crawl

We should verify all the exercises in the getting started guide. While updating it for 5452, I noticed that the Run Window is no longer accessible.

#2 - 08/17/2012 07:02 PM - Daniel Crawl

Fix references: FSM -> Modal and CT -> Continuous.
SDF default iterations is now 1.

#3 - 08/18/2012 04:51 PM - Daniel Crawl

Add new command-line options for executing KARs, redirecting display actors, etc. See the full list here:
https://kepler-project.org/developers/reference/executing-kepler-from-the-command-line/

#4 - 11/14/2012 05:27 PM - Daniel Crawl

Jianwu and I have updated the documentation, including:

- references and screenshots of CT > Continuous
I didn't see any references to FSM
- add new options for command-line execution

Still to do:

- update section 6.9: the demo workflow no longer reads the gene sequence from a web service.
- recreate figure 4.23: too blurry to be useful.
- assemble into a single PDF and check in to common/configs/.../UserManual.pdf

#5 - 11/16/2012 05:58 PM - jianwu jianwu

Dan and I created user manual documentation 2.4 at kepler doc trunk r1412.

#6 - 11/26/2012 03:22 PM - jianwu jianwu

user manual documentation is also checked into kepler trunk at common module. closing the bug.

#7 - 03/27/2013 02:31 PM - Redmine Admin

Original Bugzilla ID was 5625
