<b>Description</b> The graph layout mechanism has a Configure Layout menu choice in Vergil. Perhaps Kepler should have this as well. The primary issue is that the Configure Layout dialog allows the user to choose to layout attributes such as annotations.  The code is in ptolomy/vergil/basic/BasicGraphFrame.java  Bug <a href="#">#5442</a> fixed View -> Automatic Layout, but this is different, we also want View -> Configure Layout.

Done. Remove \$HOME/KeplerData/modules/gui/configuration/uiMenuMappings\_en\_US.xml if it exists.
