

Kepler - Feature #5666

Build system needs a target to build all common or blessed non-core modules

Description

There should be a way to easily build all the common or "blessed" non-core modules.

For example, "ant change-to -Dsuite=kepler" does not check out reporting or tagging.

We should have notion of "blessed" modules, which I would say at a minimum must meet two requirements:

- 1) There is someone on kepler-dev who is actively maintaining the module
- 2) There is at least one automatic test that at least does a smoke test to ensure that the module works. More tests are better, but "ant test-blessed" or something should do something with each module.

Having blessed modules would help in refactoring the tree because we would have a better idea about what will break.

History

#1 - 03/27/2013 02:31 PM - Redmine Admin

Original Bugzilla ID was 5666

#2 - 08/11/2015 05:43 PM - Daniel Crawl

- Tracker changed from Bug to Feature

#3 - 08/16/2015 06:03 PM - Daniel Crawl

- Target version changed from 2.5.0 to 2.X.Y
