Target version:	EML2.0.0rc1	Spent time:	0.00 hour
Bugzilla-Id:	567		

Description

In the 8/21/02 conference call, it was agreed that Chad and Peter would create a sample instance document of EML that encompassed as many features of EML as possible. This document would be a sort of reference implementation for others to look at. It will be distributed with eml2.0.

History

#1 - 09/10/2002 03:08 PM - Chad Berkley

we created a bunch of eml instances (one for each module with a root element). They are in the 'test' directory and can be validated by running 'ant test'. Because of time constraints, I don't think that a complete eml instance document is going to get produced for 2.0.0rc1 unless I get some time to work on it tomorrow.

#2 - 09/13/2002 10:21 AM - Chad Berkley

I added a very simple eml instance document. It could be made more complex in the future if need be.
