

Kepler - Bug #5670

see if runtimemonitor module can be deleted, contains duplicate code

08/09/2012 06:45 PM - Derik Barseghian

Status:	New	Start date:	08/09/2012
Priority:	Normal	Due date:	
Assignee:	Derik Barseghian	% Done:	0%
Category:	general	Estimated time:	0.00 hour
Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	5670		
Description			
The runtimemonitor module contains these classes:			
./runtimemonitor/FigureUpdater.java			
./runtimemonitor/MonitorAttribute.java			
./runtimemonitor/MonitoredStatus.java			
./runtimemonitor/MonitorIcon.java			
./runtimemonitor/ProcessCentral.java			
./runtimemonitor/ProcessCentralWindow.java			
./runtimemonitor/RuntimeMonitor.java			
./runtimemonitor/TableData.java			
Everything but ProcessCentral, ProcessCentralWindow, and TableData are near duplicates of code now in gui.			
fsaresh worked on this. Is this code used? Should the module be removed? I don't know if anything is using it anymore. Sensor-view and vanilla don't, so this bug isn't high priority.			
I also see at r17463 dzinn also checked in duplicates of these classes to the pws module, which I don't know anything about.

Hi Bertram, do you know the status of the ProcessCentral and pws module work?
