

Kepler - Bug #5671

Workflow Run Manager tries to connect to keplerDevRepository as a database instead of kar store

08/10/2012 01:18 PM - Derik Barseghian

Status:	New	Start date:	08/10/2012

Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	5671		

Description

If you enable kepler dev in your local trunk repository and authentication configuration.xml files, the Workflow Run Manager tries to treat it as an sql provenance store, instead of a remote kar repository. When you change to keplerDevRepository w/ the workflow run manager, you can get the error below when it tries to connect to the database, which it shouldn't try to do. I suspect something minor, as it can still connect to the keplerRepository (as a remote kar repository, not database) fine.

Also, to 2.3 can connect to keplerDevRepository (if you configure it to include it) fine.

```
ProvenanceStore constructor. type:EcogridRepository for keplerDevRepository
java.sql.SQLException: S1000 General error java.lang.RuntimeException: remote open not allowed
ERROR in WorkflowRunManagerPanel reconnect() unable to connect.
