

Kepler - Bug #5674

The patch downloader dialog can fail to automatically restart Kepler

Description			
In pre-release sensor-view-0.9 testing on os X 10.8, I found Kepler-2.3's patch downloader gui can fail to automatically restart kepler. It quits, the kepler icon bounces and then disappears. Subsequent start of Kepler from the Kepler icon works. I think we've had this problem in the past, search for related bugs.			

History

#1 - 08/16/2012 01:44 PM - Derik Barseghian

I did see this again on 10.8 after starting the test procedure again from scratch.

#2 - 08/16/2012 03:10 PM - Derik Barseghian

Happened to me in 10.7 too when starting from scratch.
