Category:	general	Estimated time:	0.00 hour
Target version:	2.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	5689		

Description

The Ptolemy Configuration MoML for Kepler is in:

common/configs/ptolemy/configs/kepler/configuration.xml

This is overridden in several modules:

ddp-common/configs/ptolemy/configs/kepler/configuration.xml

fault-tolerance/configs/ptolemy/configs/kepler/configuration.xml

map-reduce/configs/ptolemy/configs/kepler/configuration.xml

As with other overrides, the problem is that when the master version changes, the copies need to be updated.

The difference is small:

```
diff common/configs/ptolemy/configs/kepler/configuration.xml fault-tolerance/configs/ptolemy/configs/kepler/configuration.xml
181a182
```

```
<input source="ptolemy/configs/kepler/contingencyTableauFactory.xml"/>
```

```
diff common/configs/ptolemy/configs/kepler/configuration.xml ddp-common/configs/ptolemy/configs/kepler/configuration.xml
181a182
```

```
<input source="ptolemy/configs/kepler/executionChoiceTableauFactory.xml"/>
```

History

#1 - 03/27/2013 02:31 PM - Redmine Admin

Original Bugzilla ID was 5689

#2 - 08/17/2015 08:43 AM - Daniel Crawl

- Assignee changed from Derik Barseghian to Daniel Crawl

- Priority changed from Normal to Low

#3 - 08/21/2015 03:54 PM - Daniel Crawl

- Target version changed from 2.5.0 to 2.X.Y
