<b>Description</b>			
Today during startup of trunk I started noticing this message on mac 10.8.1:			
<pre>[run] Building Kars... [run] start of workflow-scheduler-gui module initializing [run] &amp;lt;OS&gt;Mac OS X&amp;lt;/OS&gt;; [run] ### chmod: illegal option -- - [run] usage:      chmod [-fhv] [-R [-H   -L   -P]] [-a   +a   =a [i][# [ n]]] mode entry file ... [run]      chmod [-fhv] [-R [-H   -L   -P]] [-E   -C   -N   -i   -I] file ...</pre>			

History

#1 - 09/19/2012 03:53 PM - Daniel Crawl

In org.kepler.ssh.LocalExec, copyFile() calls chmod --reference. This option does not exist on Mac. I bet this method is now being called after removing the duplicate file copy code.

#2 - 09/19/2012 04:21 PM - Sean Riddle

Yes, this is caused by the call on line 104 of tagging/src/org/kepler/module/tagging/Initialize.java.

#3 - 09/28/2012 01:58 PM - Daniel Crawl

I updated LocalExec.copyFile() to no longer call chmod --reference on Mac.

To reproduce, remove \$HOME/.kepler/cache-2.4/modules/tagging/ontology\_catalog.xml, and start Kepler with a suite that includes tagging.

#4 - 10/30/2012 12:59 PM - Derik Barseghian

I still get this error message when starting e.g. the sensor-view suite on trunk head.

#5 - 10/30/2012 03:46 PM - Derik Barseghian

Fixed at r30991. sensor-view-utils-1.0.jar in sensor-view suite needed to be updated to include change to LocalExec.
