Description

If you search for something, then click "Revise Search" to reopen the search dialog, the butterfly starts flapping in the search results window. If you then hit "Cancel" in the dialog, you are returned to the search window, but the butterfly keeps on flapping forever. Need to turn it off.

History

#1 - 08/23/2002 05:45 PM - Jing Tao

In ReviseSearchCommand class, only after search started, the MorphoFrame will be set busy. When it finished, it set busy false. So now, if you click revise search button in a search result MorphoFrame, a query dialog will show. But the butterfly in the search result MophoFrame wouldn't flap. So if you click cancel button in query dialog, the butterfly wouldn't flap either. But if you click search button, the butterfly will flap and it will stop when search is done.

By the way, in ReviseSearchCommand class, SwingWorker class was added. Now search itself will be executed in another thread. It will improve Morpho's responsibility.
