

Morpho - Bug #5739

Refactor login status to reflect client certificate status

11/20/2012 11:57 AM - ben leinfelder

Status:	Resolved	Start date:	11/20/2012
Priority:	Normal	Due date:	
Assignee:	ben leinfelder	% Done:	0%
Category:	morpho - general	Estimated time:	0.00 hour
Target version:	2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	5739		
Description			
<p>Rather than checking session-based login status, Morpho should check for a) existence of client certificate, b) validity of certificate, including expiration and probably issuer. We can display the subject for the currently-found client certificate. Right now we will just assume the default CILogon location, but in the future each profile should have its own copy of a client certificate.</p>

Now showing the subjectDN for the client certificate configured (on a per-profile basis). If the client certificate is within the expiration window and there is a network connection, then we consider the user "logged in". Admittedly, this is naive, but functional for the now.
