

Morpho - Bug #5758

Morpho revision handling is fragile

12/03/2012 03:37 PM - ben leinfelder

Status:	Resolved	Start date:	12/03/2012

Target version:	2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	5758		
Description			
<p>A few times in the past I've had trouble with the local-revisions file being unparsable by the apache config library. When I look at the content it is valid XML and looks fine. Eventually (after a few restarts of Morpho) I could get it to read the file correctly.</p> <p>However, I did this again today and hadn't fully shutdown my first Morpho instance and then with two instances running I quit one then the next one. On start up the file was empty. My file was: /Users/leinfelder/.morpho2/profiles/leinfelder/local-revisions.properties</p> <p>This error seems to crop up when I "terminate" morpho abruptly (like form eclipse when it can't hot swap my latest changes). I think we need to be able to recover from unplanned System.exits no matter what.</p>

I can't duplicate the bug. But I did take a look at the code and found some nested synchronized code. The code was removed and hopefully the issue has been fixed. Ben, please write a comment when you see it happen again.

#2 - 12/20/2012 02:19 PM - Jing Tao

I dug around the code again and found there were some code to modify the revision property during the initial method (reading the revision property file). So both reading and writing happened simultaneously. I removed this part. Hope the issue has been fixed.

After the change, morpho has worked very well for me. I am closing the bug. If there is any problem happen again, we can reopen this bug.
