Description

I created a data package with a data file successfully. The docid of eml was tao.112 and data file id was tao.110. I modified the access rules for the data file and saved it. The eml id was tao.116 and the data file is tao.114. Then i closed the data package and opened it again. I modified the access rule and wanted to save it. It gave me an error:

Should not update data file id tao.114 because it is not the latest revsion (tao.110)
