Description			
I used the data package wizard and data table wizard to create a new data package. This data package has a data file as well. However, when i saved it, i can't find a resource map file associated with the data package.

History

#1 - 01/10/2013 01:52 PM - Jing Tao

I opened the data package and updated the entity access rules. Then I saved it. Now i can get the resource map. However, the resource map is talking about the old identifiers.

The eml id is tao.166 and the data id is tao.164. But the resourceMap_tao.160 is abut tao.162 and tao.160 which were the previous versions.

When a new entity was created, the entity information will be added to MorphoDataPackage object. Also if any id is updated, the MorphoDataPackage object will be updated as well.
