

## Morpho - Bug #5809

### Default save behavior to always include local store

01/24/2013 11:22 AM - ben leinfelder

<b>Description</b>			
<p>Currently you can opt to save your datapackage changes to either LOCAL, NETWORK, or BOTH. This means you can make changes to a package then opt to save them only to the NETWORK. This can leave your local store a version behind and I don't undersand the usecase for that.</p> <p>I am proposing that we <i>always</i> save changes locally (if local does not already have the latest version).</p> <p>I started thinking about this because of a related bug that displayed different local and network revisions simultaneously (<a href="#">#5805</a>). I think we should still try to address that bug, but I'm not exactly sure how to guarantee it will not continue to be a problem especially if we maintain distinct revision histories for local and network content. (This may qualify as yet another bug for discussion).</p>
