Target version:	2.0.6	Spent time:	0.00 hour
Bugzilla-Id:	5814		

Description

The "dataone" skin includes an account mapping utility that allows you to simultaneously login to Metacat using your LDAP account and also the D1 portal (using a CILogon identity) and then map them as equivalent.

We want this to be solid if we expect thousands of users to use it.

History

#1 - 02/22/2013 11:49 AM - ben leinfelder

Moving to 2.0.6 release in support of Morpho 2.0

#2 - 02/24/2013 11:16 PM - ben leinfelder

With a client certificate for a mapped identity, I am able to see network packages that are owned by one of my equivalent identities (even when public cannot read them). This means both the multi-owner pathquery and the permission expansion mechanisms are working as expected.

#3 - 03/25/2013 02:33 PM - ben leinfelder

we've been using this on mn-demo-5 with good result
