

## Morpho - Bug #5861

### Local delete doesn't delete the file storing the system metadata

02/12/2013 06:15 PM - Jing Tao

|                                                                                                                         |              |                        |            |

| <b>Description</b>                                                                                                      |              |                        |            |
| The delete of local data package does delete the package itself. But it doesn't delete the stored system metadata file. |              |                        |            |

#### History

##### #1 - 02/12/2013 10:42 PM - ben leinfelder

I think it's safe to remove the SystemMetadata file as well. We should not, however, delete any referenced data files since they might be included in other packages (I know making a duplicate of an EML package will preserve the reference to the same data).

##### #2 - 02/14/2013 02:22 PM - Jing Tao

yeah. we should keep the data file. Actually, the delete doesn't remove the data file.

However, I think we should remove the ore document and its system metadata because the metadata (eml) in the ore doesn't exist any more.

By the way, i believe the only way we can figure out the id of an ore document is "resourceMap\_" + metadata id.

##### #3 - 02/14/2013 03:54 PM - Jing Tao

Now morpho will delete both the metadata (including the associated system metadata) and the ore document(including the associated system metadata) if it exists.
