

Morpho - Bug #5866

Needs correct behavior for saving both when the saving network fails

02/13/2013 05:12 PM - Jing Tao

Status:	Resolved	Start date:	02/13/2013
Priority:	Normal	Due date:

Target version:	2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	5866		
Description			
When we choose to save a data package to the both location, the result of saving is the unsaved morpho frame (the frame before the saving) even though the local saving succeeds but the network saving fails. Since the local saving succeeded, we should display the local new data package and tell user the network saving failed.			

History

#1 - 02/14/2013 03:58 PM - Jing Tao

During the saving both process, the exceptions for local saving and network saving is caught separately. Morpho can show appropriate data package base on the success in the local and network saving .
