

EML - Bug #588

Remove lineage tags in documentation stylesheets

09/12/2002 03:42 PM - David Blankman

Status:	Resolved	Start date:	09/12/2002
Priority:	Normal	Due date:	
Assignee:	Matt Jones	% Done:	0%
Category:	eml - general bugs	Estimated time:	0.00 hour
Target version:	EML2.0.0rc2	Spent time:	0.00 hour
Bugzilla-Id:	588		
Description			
<p>There are many incorrect lineage references. In discussions with Matt we concluded that rather than spending time trying to correct all of them, we should remove their generation in the documentation stylesheets. We may decide to eliminate lineage tracking because even though, "their purpose was good, but they are essentially impossible to maintain, so the data in them is useless".</p> <p><David> We should make a decision on lineage before RC2</p> <p><matt> kill it</p> <p><matt> :)</p> <p><matt> or at least kill it in the stylesheets</p>			

History

#1 - 09/12/2002 04:22 PM - Peter McCartney

I say leave it in for now, but suppress it in the style sheets. I think it could have value in the long run if it's done properly, ie - if it documents the true source and not just what version of EML in was introduced in.

#2 - 09/13/2002 01:10 AM - Matt Jones

OK, lineage was removed from the stylesheet so it no longer shows up in the docs even though the tag is still in the schemas. This is all we'll do for RC1.

A later release may either:

- 1) delete the lineage tags from the schemas
- 2) update the lineage element content to be accurate and useful

Lets not leave it as it is for the next release. Moving milestone to EML2.0.0 so that we deal with it later.

#3 - 10/01/2002 12:46 PM - Matt Jones

Decided to remove them. Will do as part of release tasks.

#4 - 10/07/2002 02:01 PM - Matt Jones

Removed all lineage tags from xsd files. RESOLVED FIXED.
