Description

One user is using Kepler 2.3 on his mac 10.8.2 (java 1.6.0_41) and finds Kepler 2.3 crashes when he does

- 1) choose 'export->xml'
- 2) click the 'KeplerData' folder under 'Save as'.

He can choose folders under 'KeplerData'. After that, the same place under the 'KeplerData' folder works. The left shortcuts, e.g. Devices and Desktop, also work for him.

I cannot reproduce it on my mac (10.6). So the error message is probably related with the new mac system. The detailed error is (full message is attached):
