

Metacat - Task #5915

Bug # 5812 (Closed): Rework default skin[s] to use SOLR query

Use MN.query(solr) in NCEAS skin

04/18/2013 05:07 PM - ben leinfelder

Status:	Closed	Start date:	04/18/2013
Priority:	Normal	Due date:	
Assignee:	ben leinfelder	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	2.2.0	Spent time:	0.00 hour
Description			
<p>As a first pass, we should refactor the NCEAS skin as it currently exists in the Metacat project and make it call MN.query() using the SOLR implementation rather than Metacat's API (action=squery)</p> <p>We would need to render the SOLR results (XML) using a re-worked resultset.xsl that could render the XML on the browser rather than the server.</p> <p>This is a good foray into our complete redesign because it allows us to use the new (fast) query but also our existing methods for displaying metadata (action=read&qformat=nceas) and adding data (NCEAS registry).</p> <p>Targeting this release for pre-NCEAS summer institute.</p>
