

Metacat - Task #5937

Feature # 5810 (Closed): Implement SOLR-based search

The solr indexes of the data file contains obsoleted ids for the resourceMap and documentBy element after updating a data package

Description			
<p>I used a morpho to insert a data package which includes the data file, eml file and resource map file to the metacat. The solr index looks good: The eml file has the correct ids for the resourceMap and documents element. The data file has the correct ids for the resourceMap and documentBy elements. For example the eml file has: <arr name="resourceMap"><str>resourceMap_tao.1.1</str></arr> <arr name="documents"><str>tao.2.1</str></arr></p> <p>the data file has: <arr name="resourceMap"><str>resourceMap_tao.1.1</str></arr> <arr name="isDocumentedBy"><str>tao.1.1</str></arr></p> <p>I modified the eml file and updated the package. So the package is resourceMap_tao.1.2, tao.1.2(eml) and tao.2.1(data file).</p> <p>The eml part looks right: <arr name="resourceMap"><str>resourceMap_tao.1.2</str></arr> <arr name="documents"><str>tao.2.1</str></arr></p> <p>But the data file looks like: <arr name="resourceMap"><str>resourceMap_tao.1.1</str><str>resourceMap_tao.1.2</str></arr> <arr name="isDocumentedBy"><str>tao.1.1</str><str>tao.1.2</str></arr></p> <p>It has the archived ids - resourceMap_tao.1.1 and tao.1.1.</p>
