

EML - Bug #595

DescriptorType

09/18/2002 12:18 PM - Tim Bergsma

Status:	Resolved	Start date:	09/18/2002
Priority:	Normal	Due date:	
Assignee:	Matt Jones	% Done:	0%

Target version:	EML2.0.0rc1	Spent time:	0.00 hour
Bugzilla-Id:	595		
Description			
eml-project.xsd has a DescriptorType. Since it is not (?) used anywhere in this file, I'm guessing it's not used in eml, and should be dropped.			

History

#1 - 09/27/2002 03:28 PM - David Blankman

The DescriptorType represents a suggested list for descriptor or theme systems. It should, I am pretty sure, be the type of the descriptor's name attribute.

Current: `<xs:attribute name="name" type="xs:string" use="required" />`

What it should be: `<xs:attribute name="name" type="DescriptorType" use="required" />`

#2 - 09/27/2002 03:39 PM - David Blankman

Changed type of descriptor's name attribute from xs:string to DescriptorType

#3 - 03/27/2013 02:14 PM - Redmine Admin

Original Bugzilla ID was 595
