

Metacat - Bug #6039

Metacat-index can't handle the metacat which doesn't have the name as "knb"

07/24/2013 04:12 PM - Jing Tao

Description			
In the web.xml of the metacat-index context, it has a parameter to locate the metacat's metacat.properties file. Its default value is: /knb/WEB-INF/metacat.properties			
I thought the value will be changed when we configure a metacat (through the web page) which doesn't have the knb name. However, it seems that this is not the case.

In the PropertiesAdmin.java class in the Metacat, we add the code to modify the value in the Metacat-index. When users change the metacat context value during the metacat configuration, the path will be changed accordingly in the web.xml in the metacat-index context.
